

Procure v10 Data Hosting

Technical Information

Bandwidth

- Our server facility offers Top level Connections through Qwest, Sprint, 360 Networks in addition to two regional Fiber rings.

Server Farm setup

- We host/operate our own hardware with dedicated IT staff. Hardware includes state of the art hardware, Windows Server 2008, Microsoft SQL Server 2008 and accompanying suites behind layered hardware and software SPAM and Security measures.

Security & Backing up data

- We will be using an SSL-VPN appliance for encrypted connectivity. Each client will have a unique User ID and Password. Users will have access only to their database.
- Our servers are in a mirror configuration utilizing a Raid 1(mirror) for the Operating System and Raid 5(Striped disks and with Parity) for SQL Data and Logs files. We will utilize backup to disc technology for daily backups.

Facility Specifications

- Secure, climate-controlled Level 1 connected data facility.
- Floor Load: +500 lbs/sq. ft.
- Scalable Internet connectivity options
- 110, 208 and 220 dedicated electrical circuits
- 600 Amp diesel Caterpillar™ generator
- 4 - 7 ton redundant HVAC environmental cooling systems
- Seismically braced racks
- OC-12 redundant fiber optic connections to Internet backbone
- Fiber: (2) Fiber entry points
- # of Fiber Conduits: (2) 3" conduits
- Constant temperature and humidity monitoring
- 24 x 7 x 365 network monitoring
- Smoke, heat & movement alarm monitoring
- Video surveillance and monitoring
